

Delving Deeper Monster Stat Blocks

Delving Deeper is a retroclone of the original 1974 edition of the fantasy role-playing game, written by Simon J. Bull and published by Immersive Ink (ddo.immersiveink.com). This document is modelled on Dan Collins's OED handouts of the same name (oedgames.com). Every value comes from MonsterDatabase-DelvingDeeper.csv, an Arena monster database of the Delving Deeper reference rules; the Equivalent Hit Dice (EHD) were computed by running Dan's Arena combat simulator on the Delving Deeper statistics. The database and the script that produced this document live in github.com/karsalfrink/Arena, directory tools/delving-deeper/; the database is proposed upstream in [danielrcollins1/Arena](https://github.com/danielrcollins1/Arena) pull request 6. The database and this document were produced with a large language model (Anthropic's Claude) under the review of Kars Alfrink; the README in that directory says how. Monsters are grouped by Arena type (animals, beasts, faerie and sylvan creatures, humanoids, men, slimes, undead, extraplanar) and listed alphabetically within each type. No. is the number appearing, Al. the alignment. Where the rules give a monster a range of hit dice (giant beetles, giant fish, pterodactyls, hydras, elementals) and the other columns agree, the family is one line with the EHD of each size in small type. Special abilities use Arena's SpecialType names. *Dragon EHDs* (marked *) are unreliable at the extremes: Arena gives a dragon hit points of HD × age category, so Very Young dragons come out far too weak and Old and Very Old dragons far too strong; only the middle ages are comparable. See tools/delving-deeper/NOTES.md. Generated from MonsterDatabase-DelvingDeeper.csv at commit 5d6cad5 (7 September 2026).
