

Delving Deeper Monster Stat Blocks

Every monster of the *Delving Deeper* rules on one line each, in the compact form of the OED Monster Stat Blocks, with an Equivalent Hit Dice (EHD) rating for each. EHD measures a monster's real fighting strength, which its hit dice alone often misjudge, so referees can pit encounters against a party with more confidence; the companion *Monster Matrices* handout uses the same ratings to build wandering-monster tables. The baseline is the fighting-man: a monster of EHD n is an even match for fighters in chain mail totalling n levels, whether n first-level fighters or one fighter of level n , averaged over levels 1 to 12. So EHD 1 is one first-level fighting-man and EHD 0 a monster that does not fight.

Monsters carry the names of Delving Deeper's Table 3.1 and are grouped by kind (animals, beasts, faerie and sylvan creatures, humanoids, men, slimes, undead, extraplanar) in Table 3.1 order within each group. *NA* is the number appearing, *AL* the alignment. Where the rules give a monster a range of hit dice (giant beetles, giant fish, pterodactyls, hydras, elementals) and the other columns agree, the family is one line with the EHD of each size in small type. *Special* lists the abilities that the Arena simulator models, under its own names; the small-type *Also* line beneath a monster gives the abilities it cannot model, which are therefore not in the EHD (see the colophon). Dragon EHDs (marked *) were measured with ordinary hit dice, not with the values in the database; see the colophon.

Colophon

Names. The database uses Arena’s names, so “Beetles, giant” is Arena’s “Two Hit Dice Giant Beetle” and so on; the groups are Arena’s monster types.

Specials. The *Special* column holds Arena `SpecialType` codes: only the Delving Deeper abilities that could be mapped onto something the simulator models, and so only those that count towards the EHD. A few codes are documentation only (Arena knows the name but does not act on it as a monster attack); the *Also* line marks these “not simulated”. Abilities with no Arena counterpart, such as burrowing, split armour classes or a larger damage figure on a high attack roll, are on the *Also* line, worded for play; the fuller record is per monster in `tools/delving-deeper/NOTES.md`.

Dragons. Arena gives a dragon hit points of $HD \times \text{age category}$ (its OD&D idiom, where a dragon’s HD are fixed), so the EHDs in the database make hatchlings far too weak and old and ancient dragons far too strong. The dragon EHDs here were therefore measured again with ordinary hit dice (`dragon-ehd.tsv` from `dragon-ehd.sh`, in which golden dragons lose their spells) and differ from the database column. See `tools/delving-deeper/NOTES.md`.

Delving Deeper is a retroclone of the original 1974 edition of the fantasy role-playing game, written by Simon J. Bull and published by Immersive Ink (ddo.immersiveink.com). This document is modelled on Dan Collins’s OED handout of the same name (oedgames.com). Every value comes from `MonsterDatabase-DelvingDeeper.csv`, an Arena monster database of the Delving Deeper reference rules; the Equivalent Hit Dice (EHD) were computed by running Dan’s Arena combat simulator on the Delving Deeper statistics. The database and the script that produced this document live in github.com/karsalfrink/Arena, directory `tools/delving-deeper/`; the database is proposed upstream in [danielrcollins1/Arena pull request 6](#). The database and this document were produced with a large language model (Anthropic’s Claude) under the review of Kars Alfrink; the README in that directory says how. Generated from `MonsterDatabase-DelvingDeeper.csv` at commit 5d6cad5 (7 September 2026).
