

Delving Deeper Monster Stat Blocks

Every monster of the *Delving Deeper* rules on one line each, in the compact form of the OED Monster Stat Blocks, with an Equivalent Hit Dice (EHD) rating for each. EHD measures a monster's real fighting strength, which its hit dice alone often misjudge, so referees can pit encounters against a party with more confidence; the companion *Monster Matrices* handout uses the same ratings to build wandering-monster tables.

Monsters carry the names of Delving Deeper's Table 3.1 and are grouped by kind (animals, beasts, faerie and sylvan creatures, humanoids, men, slimes, undead, extraplanar) in Table 3.1 order within each group. *NA* is the number appearing, *Al* the alignment. Where the rules give a monster a range of hit dice (giant beetles, giant fish, pterodactyls, hydras, elementals) and the other columns agree, the family is one line with the EHD of each size in small type. *Special* lists the abilities that the Arena simulator models, under its own names; abilities it cannot model are left out (see the colophon). Dragon EHDs marked * are only reliable for the middle ages.

Animals

Monster	NA	AC	MV	HD	EHD	Atk	Dam	Al	Special
Ants, giant	2d6	3	18	2	1	1	1d6	N

Colophon

Names. The database uses Arena’s names, so “Beetles, giant” is Arena’s “Two Hit Dice Giant Beetle” and so on; the groups are Arena’s monster types.

Specials. The *Special* column holds Arena SpecialType codes: only the Delving Deeper abilities that could be mapped onto something the simulator models, and so only those that count towards the EHD. A few codes are documentation only (Arena knows the name but does not act on it as a monster attack). Abilities with no Arena counterpart, such as burrowing, split armour classes or the larger damage on a high attack roll, are recorded per monster in `tools/delving-deeper/NOTES.md` and are not shown here.

Dragons. Arena gives a dragon hit points of $HD \times \text{age category}$, so hatchlings come out far too weak and old and ancient dragons far too strong; only the middle ages are comparable. See `tools/delving-deeper/NOTES.md`.

Delving Deeper is a retroclone of the original 1974 edition of the fantasy role-playing game, written by Simon J. Bull and published by Immersive Ink (ddo.immersiveink.com). This document is modelled on Dan Collins’s OED handout of the same name (oedgames.com). Every value comes from `MonsterDatabase-DelvingDeeper.csv`, an Arena monster database of the Delving Deeper reference rules; the Equivalent Hit Dice (EHD) were computed by running Dan’s Arena combat simulator on the Delving Deeper statistics. The database and the script that produced this document live in github.com/karsalfrink/Arena, directory `tools/delving-deeper/`; the database is proposed upstream in [danielrcollins1/Arena pull request 6](#). The database and this document were produced with a large language model (Anthropic’s Claude) under the review of Kars Alfrink; the README in that directory says how. Generated from `MonsterDatabase-DelvingDeeper.csv` at commit 5d6cad5 (7 September 2026).
